

# BIOSINKER PRO

By HPNE

## Gamma-stable Tube Weight

For the applications requiring the highest purity and strength, our Biosinker Pro tube weights are the ideal solution. The tube weight maintains optimal depth and placement of your tube to obtain the most efficient flow possible.

Biosinker Pro represents a slight design change from our previous Biosinker, featuring a new, compact design while still maintaining its signature pointed tip. Additionally, Biosinker Pro utilizes a standard female luer connector, allowing for a wide range of tubing connectors to be used. Biosinker Pro is USP Class VI Compliant and gamma-stable but can also be provided sterilized or non-sterilized.

**Uses include:**

- A direct replacement for a rigid dip tube
- Keeps tube weighted during the dispense cycle
- Prevents curling, sticking or floating
